

The UK's leading manufacturer of physical security products

Retail Price List

CE MARKING (E

The letters "CE" are the abbreviation of French phrase "Conformité Européene" which literally means "European Conformity."

- 1. CE Marking on a product is a manufacturers and installers declaration that the product complies with the essential requirements of the relevant European health, safety and environmental protection legislations. Product Directives contain the "essential requirements" and/or "performance levels" and "Harmonised Standards" to which the products must conform. Harmonised Standards are the technical specifications (European Standards or Harmonisation Documents) which are established by several European standards agencies (CEN, CENELEC, etc). CEN stands for European Committee for Standardisation. CENELEC stands for European Committee for Electrotechnical Standardisation.
- CE Marking on a product indicates to governmental officials that the product may be legally placed on the market in their country.
- **3.** CE Marking on a product ensures the free movement of the product within the EU single market.
- CE Marking on a product permits the withdrawal of the nonconforming products by customs and enforcement/vigilance authorities.

WHAT IS THE MACHINERY DIRECTIVE?

The Machinery Directive (current)

The Supply of Machinery (Safety) Regulations 1992, implements the European Machinery Directive and contains detailed requirements for manufacturing and installing safe new machinery.'

- CE marking for electrically operated roller shutters was introduced with effect from 1st January 1995, under the Machinery directive.
- From the 1st January 1997 all electrically operated roller shutters had to be CE marked.
- The Machinery Directive is risk assessment led. There are no product specific requirements.

Manufacturers (SWS UK) obligations are to:

- Prepare a risk assessment for all electrically operated products.
- Maintain a technical file for each electrically operated product.
- Provide installers with a Declaration of Incorporation to the Machinery Directive for each standard electrically operated product.
- Issue comprehensive fitting instructions.
- Issue operating and maintenance instructions.

Installers obligations are to:

- Install each electrically operated product as per the manufacturer's fitting instructions.
- Allocate each product with a unique reference number.

- Attach a CE label to the product.
- Provide end-users with a Declaration of Conformity to the Machinery Directive and retain a 2nd file copy.
- Provide customers with operating and maintenance instructions.

WHAT IS CPR?

CPR - Construction Product Regulations

The CPR builds upon the CPD and aims to break down technical barriers to trade in construction products within the European Economic Area (EEA). To achieve this, the CPR provides for four main elements:

- A system of harmonised technical specifications.
- An agreed system of conformity assessment for each product family.
- A framework of notified bodies.
- CE marking of products.

replaced.

The CPR harmonises the methods of assessment and test, the means of declaration of product performance and the system of conformity assessment of construction products, but NOT national building regulations. The choice of required values for the particular intended use is left to the regulators and public/private sector procurers at the national level. However, such required values must be expressed in a consistent manner (technical language) as used in the harmonised technical specifications.

The full legislation relating to manufacturers, importers and distributors came into force on 1 July 2013, when the CPD was

SWS UK'S AND CUSTOMER'S OBLIGATIONS TO CPR

Manufacturers (SWS UK) obligations are to:

- Fulfil all requirements of the main product standard (BSEN 13241-1 Industrial, commercial and garage doors and gates – product standard part 1 – products without fire resistance or smoke control characteristics).
- Fulfil all requirements in supporting standards.
- Have safety functions and environmental characteristics tested by a UKAS accredited body.
- Have a fully documented, externally audited Factory Production Control system (FPC). SWS UK is registered to ISO 9001:2000
- Provide installers with a Declaration of Performance to the CPR.
- Issue comprehensive fitting, repairing and dismantling instructions
- Issue a log book which is to remain with the product.
- Attach a CE label under the CPR to the manufactured product.

Installers obligations are to:

Retain a copy of the Manufacturers Declaration of Performance to the CPR and the Manufacturers Declaration of Incorporation to the Machinery Directive.

SPECIALS

All SWS products that are manufactured within the sizes and specifications listed in this price list are fully compliant to the essential requirements of the new product standard.

To manufacture a product outside of the specifications listed within this price list will require evaluation, possibly internal and external testing and a dedicated risk assessment and installation by SWS UK. This process will have associated costs and time implications regardless of whether we are able to supply the product or not.

*DOOR OR WINDOW

BSEN 13241-1 and its supporting standards, under the CPR, only apply to products installed over doorways. Products over windows have different product standards but they must still be compliant under the machinery directive if electric operation.

A doorway is any opening designed to give safe access to persons or vehicles in industrial, commercial or residential premises.

It is SWS UK's decision to classify all servery and cabinet applications as doorways.

To comply with the standard all doorway shutters require an anti-fall back device when the maximum out-of-balance static force exceeds 200 newtons† after a single suspension component failure. The doorway shutters affected by this will be indicated on the pricing tables which follow in this price list.

The anti-fall back device supplied will depend on the product type and operation. Spring loaded shutters requiring an anti-fall back device will be supplied with two springs to satisfy the standard.

Please note this will now mean that there are some widths of shutters which can no longer be manufactured if the shutter is required for a doorway. When applicable this will be clearly indicated on the price tables. Electrically operated shutters requiring an anti-fall back device will be supplied with either an anti-drop brake or a spring. The price table will indicate which antifall back device will be installed.

OPPORTUNITIES & BENEFITS OF CE MARKING

By following some simple steps you will be minimising the risk of injury to installers and users of roller shutters while meeting your legal obligations.

Importantly, under the Health & Safety at Work Act 1974, landlords and owners of domestic, commercial and industrial premises are under a legal obligation to ensure that new and existing shutters are maintained to the appropriate standard. In the event of an accident, investigators will ask your customer's Health and Safety representative to provide them with evidence of a proper risk assessment, correct installation, maintenance schedule and availability of operating instructions.

† The newton is the SI unit of force. One newton is the force required to give a mass of 1 kilogram an acceleration of 1 metre per second. "Doorway Shutters, garage doors and gates must comply with the Machinery Directive and the Construction Product Regulation. Using products from 'SWS UK' that are properly CE marked demonstrates compliance."

"You are breaking the law if you accept, an electrically operated shutter that has not been properly CE marked."

Key benefits of CE marking:

- Products should become safer leading to a reduction in accidents.
- If an installer is subject to legal action, CE marking under the Construction Products Regulation provides a recognised legal framework to help offset installer liability.
- All employers have legal duties under: The Provision & Use of Work Equipment Regulations. Compliance under the CPR and MD not only ensures that products are safe but that they remain so through regular maintenance.
- With much greater emphasis on ensuring products are installed in an appropriate manner (i.e. are 'fit for purpose') fewer callbacks are anticipated.
- To comply with the CPR all our roller shutters and roller garage doors have undergone wind loading tests. This now provides us with accurate performance information for our range of products.
- Promotion of your compliance to this legislation will enhance your businesses credibility when approaching new and existing customers.
- To ensure our range of products comply with the new legislation there has been several product developments resulting in higher specification products and greater functionality.

Key points to remember

- It is the installer's / distributor's responsibility to ensure that the product selected is fit for the buyer's purpose and that it is of satisfactory quality for its intended use.
- Is it a door / servery or window?
- If a door is the size sufficient to require an anti-fall back device? (please refer to the appropriate pricing matrix)
- The application may restrict the choice of control equipment (see page 62 for further information).
- All products must be installed in accordance with our fitting instructions.
- A Declaration of Conformity to the MD must be issued once an electrically operated product has been installed. In addition a CE label should be attached to the product.
- The end-user should be familiarised with the safe operating procedures and issued with the operating and maintenance instructions/log book provided by SWS UK.

IMPORTANT

Please read the notes below before using this price list

- 1. It is the installer's / distributor's responsibility to ensure that the product selected is fit for the buyers purpose and that it is of satisfactory quality for its intended use.
- Always place orders in metric, using SWS UK order forms or via our online ordering system. Consider each section carefully before moving on to the next. If you require delivery by a set date, this must be highlighted on your order.
- Please ensure you clearly indicate the quotation number on your order, otherwise the price on the order confirmation will be chargeable. If a quotation does not match the order in every respect, the quotation must be recalculated prior to an order being accepted.
- Distributors must notify all changes to existing orders in writing. Failure to do this
 prior to commencement of manufacturing will result in additional charges being
 made.
- Product sizes are always 'overall'. In the case of shutters to the top of box and outside of guides. For retractable gates from underside of bottom track to top of top track and the outside of the fixing frame.
- When specifying, pricing and ordering a product always refer to the width (across the top) first and then the height (down the side).
- 7. Be mindful that the bottom slat on shutters sits into the top of the guide rails by between 60 mm and 93 mm depending upon slat type. Further details are available from the appropriate product overview section of our new trade price list. Any products ordered 'clear opening' or 'underside of stops' will have the appropriate dimension added to the width and height.
- 8. All products are manufactured to the sizes given on your order. It is therefore important that you make any deductions or additions which may be necessary before placing your order.
- Use the product codes illustrated in this trade price list when ordering components.
- 10. Always make sure that you receive an order confirmation, check it carefully and notify the office immediately with any amendments. Failure to do this will result in costly rework and time delays which may involve you incurring additional charges.
- 11. We require a responsible person to be present and assist with unloading orders on delivery.
- 12. Deliveries received must be checked before signing the delivery note. This is especially important with overnight carriers as it not possible for us to claim compensation for damages or missing items unless highlighted on the driver's delivery notes. If possible, take a photocopy of this documentation for future reference.
- 13. If damage is detected, please complete a Damage Identification Sheet (available from your online distributor area) and email to customerservicesfaxes@swsuk.co.uk along with a photograph.
- 14. Ensure fitting instructions are followed carefully by installation engineers and if the product is electrically operated it must be CE marked under the Machinery Directive after commissioning the product. Once CE marked the installer has an obligation to issue completed documentation to the end user that confirms that the product(s) have been fitted in accordance with our instructions.
- 15. Mill finish shutters tend to be very stiff to operate and are therefore unsuitable for everyday use in this condition. Please note SeceuroVision profiles are not available in mill finish.
- **16.** Tables which indicate axle size, box extension and motor size are intended as a quide only and will vary with exact size and specification of shutter.

Type of Operation:

Minimum Width For Spring Loaded Shutters is 665 mm

Maximum size for rod crank operation

Electric Operation (vented slat)

ANTI-DROP BRAKE When required (as shown above) a surcharge of £89 must be added to the appropriate shutter price.

MANUAL OVERRIDE

To add the option of manual override a surcharge of £95 must be added to the appropriate shutter price see page 27.

Overview of SeceuroShield 150

COMMON APPLICATIONS

Internal, low security domestic sites, bars and serveries. Provides heat insulation in conjunction with a window, shading and light control. Not for shops, garage doors or commercial windows.

CONSTRUCTION

Curtain Slat

shutter box (mm)

Height including

SeceuroShield 150 uses a double skin foam filled aluminium slat, spring and lock operated shutters are supplied non-vented as standard, all other operations are supplied vented as standard but also available non-vented.

Bottom Slat

Extruded aluminium with rubber bottom seal. Reinforcing handle option (AEGR) surcharge £9.25 per linear metre available on request. Spring & lock shutters are supplied with a unique, patented, reversible bottom slat. This bottom slat features a top quirk which can be removed and turned around in the event that the bottom slat lock needs to face the other way.

Shutter Box

Die cast aluminium end plates with two piece roll formed aluminium box.

Extruded aluminium with box section for fixing/reinforcement and high density 5mm pile brush seals. H25 guide profile as standard, H17 and H30 are available on request and H40/S is available at extra cost - (see page 20).

Accessories - For applicable accessories and components see pages 20-29 & 44-52

*Up to 800 mm

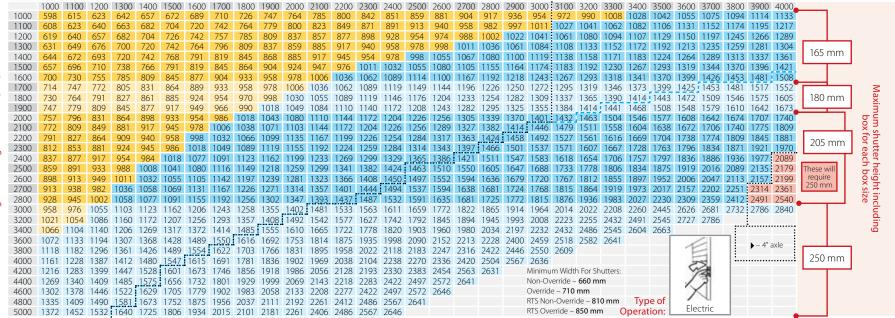

ANTI-DROP BRAKE

When required a surcharge of £89 must be added to the appropriate shutter price.

MANUAL OVERRIDE

To add the option of manual override a surcharge of £95 must be added to the appropriate shutter price see page 27.

Width including guide rails (mm)

Overview of SeceuroShield 38

COMMON APPLICATIONS

High security domestic sites, medium security office/ commercial use dependent upon aperture size and risk. Small shopfronts and single garage doors with restricted headroom.

CONSTRUCTION

Curtain Slat

SeceuroShield 38 uses a double skin extruded aluminium slat.

Bottom Slat

Extruded aluminium with reinforcing angle. Available with rubber in place of reinforcing angle as a no cost option. Spring & lock shutters are supplied with a unique, patented, reversible bottom slat. This bottom slat features a top quirk which can be removed and turned around in the event that the bottom slat lock needs page 20) Please note H17 guide to face the other way.

Shutter Box

Die cast aluminium end plates with two piece roll formed aluminium box. Larger sizes will be supplied with zinc plated steel end plates.

site, ensuring that each section can be handled safely.

▶ Shutter curtains over 50 kg will be supplied in multiple sections for assembly on

Extruded aluminium with box section for fixing/reinforcement and high density 5 mm pile brush seals. H30 guide profile as standard, H17 and H25 are available on request and H40/S is available at extra cost - (see rail is suitable for internal use only.

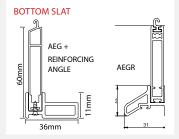

Accessories - For applicable accessories and components see pages 20-29 & 44-52

Punched or Perforated (With Glazing)

447 466

470 491

493 515 536

Please note

If the shutter contains a combination of punched and solid slats refer to the table for Punched with Glazing to identify if you will require an anti-drop brake.

Overview of SeceuroVision 38

The prices shown are the surcharge for fully perforated, fully punched or fully punched and glazed shutters, up to the underside of the box. If you require only a section of the shutter curtain to contain vision please use the calculation below.

If partial vision within a curtain:

Punched or perforated vision surcharge = (number of slats x total width of shutter) x £1.86 per linear metre Punched and glazed vision surcharge = (number of slats x total width of shutter) x £3.90 per linear metre

THIS PRODUCT IS NOT AVAILABLE WITH H17 GUIDE RAILS, WIND **ENDLOCKS OR BRICK BOND SPACING**

Use of solid slat

Solid slats are always used within the shutter box, part of a solid slat may be visible on a completely punched curtain

Larger Widths

If 4 or less punched or 10 or less perforated vision slats are required in a SeceuroShield 38 Built-on shutter the maximum width increases to 4000 mm

Punched 44% vision (picture shows polycarbonate glazing) Perforated 18% vision 5mm dia. 35 holes per 100 mm of slat.

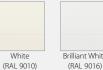

BOX LID

Gap increased by 50 mm

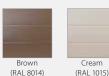

Box lids over 2000 mm are reinforced with 30 x 20 mm aluminium angle to reduce deflection of the box lid and modified to allow for deflection of the curtain

STOCK COLOURS FOR CURTAIN (SLATS), **BOTTOM SLAT, BOX & GUIDES**

Colour references on standard product are a guide only and will not match powder coated finish.

Stainless Steel shutter available. Please contact your Account Manager for a quotation.

Please note

This product is not available with punched or perforated slats

SPECIAL LPCB RESTRICTIONS

A SeceuroShield 3801 must be supplied with either a lock in the bottom slat or a pair of bullet locks attached to the guide rails. The price shown includes a lock in the bottom slat. The surcharge for upgrading to bullet locks in place of the bottom slat lock is £25 SeceuroShield 3801 is available with a

manual override. The manual override handle must only be operated from the inside of the building. (Not included in the price shown).

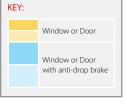

The validity of the LPCB certification is contingent upon each shutter being installed in accordance with the requirements of LPS 1175. Details available on request.

Minimum Width 900 mm Minimum Height 900 mm Maximum Width 3000 mm Maximum Height 4000 mm

All approved shutters must carry a label detailing the manufacturer, test standard and rating.

ANTI-DROP BRAKE

When required a surcharge of £89 must be added to the appropriate shutter price.

MANUAL OVERRIDE

To add the option of manual override a surcharge of £95 must be added to the appropriate shutter price see page 27.

4 – 60 mm axle. **▶** – 70 mm axle

Overview of SeceuroShield 3801

COMMON APPLICATIONS

Domestic, retail and commercial properties requiring an above average level of security.

CONSTRUCTION

SeceuroShield 3801 uses a double skin extruded aluminium slat fitted with anti-vandal windlocks.

Bottom Slat

Height including shutter box (mm)

Extruded aluminium with steel reinforcing angle. Supplied with a lock in the bottom slat unless bullet locks are requested (£25 surcharge applies) see page 20 for details. The locks must be disengaged before operating the shutter or the motor will be damaged.

Shutter Box

Steel end plates with two piece roll formed aluminium box.

Guide Rails

H40/S high security guides reinforced with steel sections at the base.

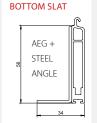

SLAT 9 mm 8.0kg m2 Nominal 38 mm

STOCK COLOURS FOR Curtain (SLATS)
BOTTOM SLAT, BOX & GUIDES

Overview of SeceuroShield 60

COMMON APPLICATIONS

Higher security on shop fronts and vulnerable office/commercial applications wherever special colours are required.

CONSTRUCTION

Curtain Slat

SeceuroShield 60 uses a double walled aluminium slat.

Bottom Slat

Extruded aluminium with reinforcing angle.

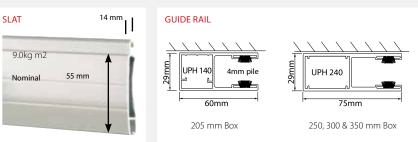

Shutter Box

Die cast aluminium end plates with two piece roll formed aluminium box. Larger sizes (shutters with a curtain weight of 75 kg upwards) will be supplied with zinc plated steel end plates.

Guide Rails

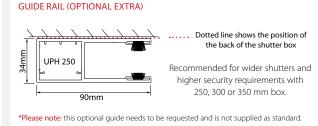

Extruded aluminium with box section for fixing/reinforcement and high density pile brush seals. UPH140 guides supplied with 205mm box, UPH240 guides supplied with 250, 300 and 350 mm box. UPH250 recommended on wider shutters and for shutters requiring higher security with 250, 300 or 350 mm box.

Accessories - For applicable accessories and components see pages 20-29 & 44-52

Overview of SeceuroShield 60

Accessories - For applicable accessories and components see pages 20-29 & 44-52

BOTTOM SLAT AEG/X + REINFORCING ANGLE

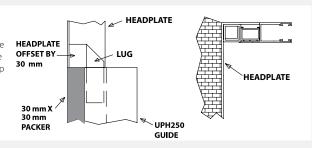

Box lids over 4600 mm

All box lids over 4600 mm wide are reinforced with 30 x 20 mm aluminium angle to reduce deflection of the box lid and modified to allow for deflection of the curtain.

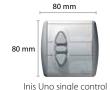

BOX EXTENSION

A box extension is required on built-on SeceuroShield 60 shutters when the curtain weight exceeds 172 kg on a 4" axle and 134 kg on a 5" axle. The projection is just 30 mm for face fixed shutters. If the shutter is reveal fixed the gap is made up using a 30 mm packer, as shown in the illustration. The overall width used when pricing and ordering shutters with box extensions is the overguide width (not including the box extension or 30 mm packer). If you are in any doubt please contact your trade sales Account Manager.

SWITCHES

All electric shutters are supplied with an Inis Uno single pole switch as standard unless another control device is requested. All switches will be supplied with a surface mount box unless a flush mounted box is requested on your purchase order. Switches are supplied "hold to run" for safety.

COMMON APPLICATIONS

Continental style steel roller shutter with scrolled slat profile. A popular choice for medium security office, retail, commercial and industrial applications. Features a neat continental style head box and aluminium guides for higher grade installations.

CONSTRUCTION

Curtain Slat

SeceuroShield/Vision 75 uses a single skin scrolled steel slat.

Bottom Slat

Galvanised "L" or "T" section bottom slat.

Shutter Box

Galvanised steel end plates powder coated to match the box colour with two piece roll formed aluminium box. Shutters with a 350 mm box will be supplied with a three piece box.

Guide Rails

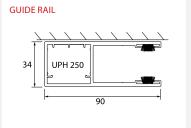

Extruded aluminium with box section for fixing/reinforcement and high density 4 mm pile brush seals. UPH250 guides supplied as standard.

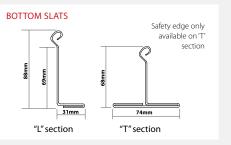

Accessories - For applicable accessories and components see pages 20-29 & 44-52

SLAT (SOLID) 19mm 10kg m2 75 mm

Minimum width for Spring Loaded shutters: 1000 mm.

THIS PRODUCT CAN BE POWDER COATED See page 68

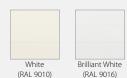

Please note: that this product will be powder coated after it has been assembled.

THIS PRODUCT CAN BE PLASTISOL COATED

Please note: this finish applies to the external face of the curtain slat only.

Standard curtain & bottom slat finish: galvanised

BOX EXTENSION

A box extension is required on built-on SeceuroShield 75 shutters when the curtain weight exceeds 172 kg on a 4" axle and 134 kg on a 5" axle. The projection is just 30 mm for face fixed shutters. If the shutter is reveal fixed the gap is made up using a 30 mm packer, as shown in the illustration. The overall width used when pricing and ordering shutters with box extensions is the overguide width (not including the box extension or 30 mm packer). If you are in any doubt please contact your trade sales Account Manager.

SECEUROSHIELD 7501 / SECEUROVISION 7501

Upgrade either the SeceuroShield 75 or the SeceuroVision 75 shutter to police and insurance approved specification. Surcharge if face fitted £82.80

Surcharge if reveal fitted £113.85

PLEASE REFER TO THE COMMERCIAL SHUTTER TECHNICAL GUIDES FOR FURTHER INFORMATION

- Must be installed internally
- The shutter box must be above the opening
- Electric operation will require either a bottom slat lock or bullet locks.
- T rail bottom slat only'

BOX LID

Box lids over 4600 mm

Black

All box lids over 4600 mm wide are reinforced with 30 x 20 mm aluminium angle to reduce deflection of the box lid and modified to allow for deflection of the curtain.

Overview of SeceuroShield 77

COMMON APPLICATIONS

Ideal for single or double insulated garage doors. High security domestic shutters, medium security office entrance doors and external shopfronts. Wider sizes are designed for internal applications only making them ideal for use as room dividers, etc. Mix with SeceuroVision 800 for partial vision through the shutter if required.

CONSTRUCTION

Curtain Slat

SeceuroShield 77 uses a double walled foam filled aluminium slat.

Bottom Slat

Extruded aluminium with rubber bottom seal.

Shutter Box

Die cast aluminium end plates with two piece roll formed aluminium box. Larger sizes (shutters with a curtain weight of approx. 75kg upwards) will be supplied with zinc plated steel end plates.

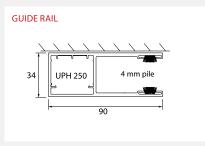

Guide Rails

Extruded aluminium with box section for fixing/reinforcement and high density 4 mm pile brush seals. UPH250 guides supplied as standard.

Accessories - For applicable accessories and components see pages 20-29 & 44-52

Please note

Anti-drop brake - requirement areas and axle lines shown on this table only apply to punched slat. If mixed or solid see glazing table.

Box extension - For further details, please refer to SeceuroShield 600. If the shutter you require will contain a quantity of solid slat you must check the punched and glazed table for an indication of box extension requirement.

Overview of SeceuroShield 800

COMMON APPLICATIONS

Designed to provide the see-through protection demanded by many local authorities for high streets and modern shopping centres. Suitable for internal or selected external applications the combination of solid and punched slats achieve optimum strength while delivering up to 58.5% vision. Optional 1.5 mm polycarbonate inserts further enhance security on external installations. Alternative uses include bar/ kiosk and commercial applications where permanent vision is required.

CONSTRUCTION

Curtain Slat

SeceuroVision 800 uses a single walled extruded and punched aluminium slat. Solid slats are always used within the shutter box, part of with zinc plated steel end plates. a solid slat may be visible on a Guide Rails completely punched curtain.

Bottom Slat

Extruded aluminium with rubber bottom seal.

Shutter Box

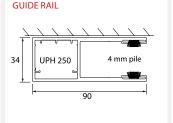

Die cast aluminium end plates with two piece roll formed aluminium box. Larger sizes (shutters with a curtain weight of approx. 75kg upwards) will be supplied

Surface mount box

of £31 net

To comply with current health and safety

legislation, electrically operated shutter(s)

must be monitored throughout operation

If this is not possible a safety device must

be fitted. Due to the risk of entrapment in

an open shutter or grille, control should

Remote or automatic control of any form

requires a dedicated risk assessment and

appropriate safety features eq. photo cells

at the top and bottom of the shutter on

only be by a momentary key switch.

Overview of SeceuroShield 900

COMMON APPLICATIONS

Internal use only on shopfronts. Very tight coiling makes SeceuroVision 900 particularly suitable for bar/kiosk and commercial applications where permanent vision is required.

CONSTRUCTION

Curtain

SeceuroVision 900 is constructed from a combination of extruded aluminium links and hinge section. Link spacing is 150 mm in line as standard, however a brick bond pattern (no surcharge), 75 mm spacing (surcharge) and solid slat profile (surcharge) are also available.

Bottom Slat

Extruded aluminium with reinforcing angle and no seal.

Shutter Box

Die cast aluminium end plates with two piece roll formed aluminium box. Larger sizes (shutters with a curtain weight of approx. 75 kg upwards) will be supplied with zinc plated steel end plates.

Extruded aluminium with box section for fixing / reinforcement and high density 4 mm or 7 mm pile brush seals, UPH140 guides supplied with 205mm box, UPH240 guides supplied with 250 and 300 mm box. UPH250 recommended on wider shutters and for shutters requiring higher security with 250 or 300 mm box.

All electric shutters are supplied

with an Inis Uno single pole switch

as standard unless another control

mount box unless a flush mounted

box is requested on your purchase

order. Switches are supplied "hold

device is requested. All switches

will be supplied with a surface

SWITCHES

to run" for safety.

Accessories - For applicable accessories and components see pages 20-29 & 44-52

H40/S Guide Surcharge

Where additional security is required (available for SeceuroShield 150 and SeceuroShield 38 only). Wind end locks will be fitted to the curtain as standard when this option is selected. See page 49 for specifications.

Code: YACCS H40/S
Each Pair £56.89

Steel Reinforcement Plates

For use with H40/S guide rails only. Supplied as standard with SeceuroShield 3801. Available as an optional extra with SeceuroShield 38 at a surcharge. Available to suit either face fitted or reveal fitted guide rails. State clearly your requirement.

Code Reveal fit: YGU00101

Each Pair £40.36

Code Face fit: YGU00102

£40.36

Guide Rail Bullet Locks
Where additional security is required.

Suitable for H40/S, UPH 240 & UPH 250 guide rails only. The default height for the centre of the bullet lock pin is

approximately 195 mm from the base of the guide. This height puts the pin in the centre of a CD38 slat. The position is adjusted for the other slat profiles to ensure the pin is in the centre of a slat. If you require the bullet lock in a different position you must specify this on your order. Bullet locks on foam filled curtains should be in the bottom slat or an extruded slat placed in the curtain at appropriate height. The bullet locks are self tapped from the rear of the guide. Available as keyed alike or as keyed different. 2 keys supplied per bullet lock. Additional keys are not available.

Code: YACCS BULLET Each Pair £80.58

Upgrade from bottom slat lock to a pair of bullet locks

Code: YACCS BULLET U/G

Each Pair £24.99

Optional 'L' brackets can be attached to the guide rails which will catch the bottom slat stops when the shutter is opening.

Code: YBOTTOMSLATKIT

SPRING LOADED SHUTTERS

Prie: £23.34

Please note this optional extra is not available for H40/S guide rails.

IMPORTANT INFORMATION REGARDING SURVEYING, ORDERING AND INSTALLING.

Must be ordered using the order form.

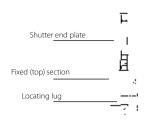

No orders will be accepted for removable guide rails unless they are ordered using the SWS UK removable guide rail order form. This will ensure you receive the products as required.

SeceuroVision shutters.

Shutters from the SeceuroVision range should be ordered with the locking bolt option in order to maintain security. This will be included by SWS UK automatically with the surcharge unless your order requests otherwise.

How will they be supplied?

Removable (lower) section of the guide rail will be supplied with the locating lug, skid and bolt attached to the guide. The fixed (top) section of guide rail will be supplied loose with the fixings required to attach it to the end plate. When attaching this section of guide rail ensure that the chamfered end of the guide rail is at the bottom. The dust caps (bar top recess) will be supplied with the top section of guide rail. Removable guide rails which meet at either 90° or 180° will be fastened together by SWS. Both guide rails will be supplied with skids but only one locating lug and only one shoot bolt per pair of guide rails.

Sloping Bottom Slats

IMPORTANT INFORMATION REGARDING SURVEYING AND ORDERING

Must be ordered using the order form

No orders will be accepted for sloping bottom slats unless they are ordered using the SWS UK sloping bottom slat order form. This will ensure you receive the product you require.

No bottom slat locks

Unfortunately it is not possible for us to supply a sloping bottom slat with a bottom slat lock fitted.

Rubber seal only

All sloping bottom slats will be supplied with the rubber seal used on our SeceuroGlide range. We are unable to supply a sloping bottom slat with a bottom slat reinforcing handle.

No woodgrain finish available

We are unable to supply sloping bottom slats in any of our range of woodgrain finishes.

Only AEG/X bottom slat

Unless supplied with a SeceuroGlide Compact a sloping bottom slat will always be constructed from an AEG/X bottom slat.

Please note: that this differs from the standard bottom slat supplied with SeceuroShield 77, SeceuroVision 800 and SeceuroGlide.

A sloping bottom slat for a SeceuroGlide compact will be constructed from an AEG bottom slat.

Limited guide rails

When a sloping bottom slat is required on a SeceuroShield 60 / 77 or a SeceuroVision 800 / 900 the shutter must have UPH250 (90 mm) guide rails. Please ensure that your survey has taken this into account. A SeceuroGlide requiring a sloping bottom slat can be supplied with either H75 or UPH250 guide rails. A SeceuroGlide Compact will always require UPH140 guide rails.

Maximum width

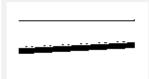

The maximum width for a sloping bottom slat is 5000 mm. This is the overall door width including guide rails.

Maximum height difference (H)

The maximum height difference (H) the sloping bottom slat can accommodate is 250 mm. When surveying you must ensure that the total height of the sloping bottom slat does not exceed the box end size for the door or you will struggle to load the curtain into the guide rails.

To obtain the total height of the sloping bottom slat you need to add the standard height of an AEG/X bottom slat (95 mm) or the standard height of an AEG bottom slat (60 mm) to your height difference (h).

You must also ensure your customer is aware that when the door is fully open the sloping bottom slat will remain in the guide rails reducing the clear height available.

Sloping Bottom Slat

We are able to supply sloping bottom slats for SeceuroShield 60 / 77 and SeceuroVision 800 / 900 shutters. Please note the conditions listed when ordering.

Door Width

0 to 2500 mm £243.21 2501 to 5000 mm £400.40

Somfy Motor Sizes and Prices

NOTES FOR ALL MOTORS

- All motors are supplied with a 2.5 metre long cable as standard.
- 5 metre and 10 metre motor extension cables can be ordered (see below right)
- All motors are supplied with mounting brackets and adaptors as required. To ensure the correct parts are supplied, when you order a motor you must make it clear the size and type of shutter and axle.
- The tables shown are a simplified guide to assist motor selection and allow for collars when appropriate. During manufacture motor requirement is calculated more precisely to suit the size of the shutter which may result in a different motor being supplied to that indicated. A higher specification motor may be substituted due to stock shortage.

ALL MOTORS (EXCL. HERCULES) FEATURE:

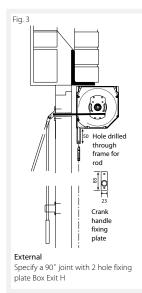

- Rapid set push button limit switches
- Clip-on drive adaptors and brackets
- Multiple mounting positions of motor head
- Standard Index of Protection rating: IP44
- Supply cable via removable connector
- Integral thermal protection
- Integral electromagnetic brakeContinuous running time: 4 mins
- Continuous running time: 4 min
- Temperature range -10c to +40c

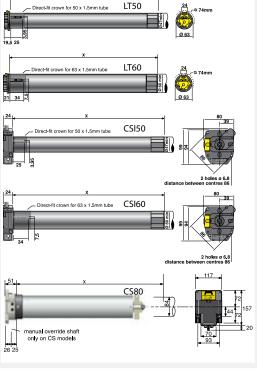

MANUAL OVERRIDE MOTORS (EXCLUDING THE HERCULES RANGE) ALSO FEATURE:

- Manual operation by hand crank in the event of a power failure
- Limit positions not affected by manual drive

Hercules motors feature:

- Fitted with flexible supply cable
- Progressive limit switches
- Temperature range: -25c to +85c
- Standard Index of Protection rating: IP44
- Integral electromagnetic brake
- Continuous running time: 4 mins

RADIO MOTOR SELECTION

set limit positions.

- Opportunities for extra sales value with less work!
- Several motors can be grouped together; no group commands required.
- Powerful range of 200 m in open space and 20 m through two concrete walls.

RTS motor only upgrade £166. For controls or further information, please contact your Account Manager who will quote you the most suitable option for your enquiry.

MOTOR NAMES

Somfy motors will no longer be given names such as Jet and Mariner but will be referred to by their range and torque value.

What do the numbers mean? LT50 10/12

LT or CSI – indicates whether the motor is a **non override** (LT) or an **override** (CSI) motor.

50, **60** & **80** – the number after the LT or CSI indicates the motor **series** that the motor belongs to

10 – The next number is the torque value for this motor.The larger the shutter the greater the torque

value required.

12 – The final number indicates the **speed** of the

motor and is the number indicates the **speed** or motor and is the number of revolutions per minute that the motor will operate at.

 Radio motors are a versatile and flexible solution, providing convenient easy-to-use features.

RTS range of tubular motors for window shutters.

Radio motors have been designed to ease the installation of

automated shutters, providing wiring and accurate remotely

Available with and without manual override facility.

Quicker installation with no wiring to the switch position.

Note - Wiring diagrams are available from the Online Distributor Area at www.sws.co.uk/wiringdiagrams Contact Marketing for further details

SeceuroGuard 1000 Retractable Security Gates Retractable Security Gates

COMMON APPLICATIONS

Internal medium to high security domestic and selected commercial and retail applications. Made to measure in powder coated pre-galvanised steel.

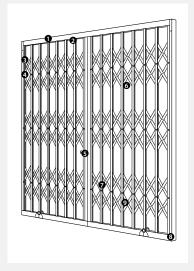

CONSTRUCTION

Lattice

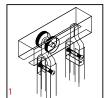

High grade steel in 'X' lattice as standard and 'S' lattice as an option. Weight 19 kgm2 nominal

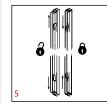

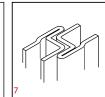

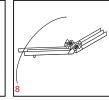

GENERAL ARRANGEMENT

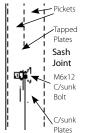

- 1 Top hung on nylon coated steel bearings
- 2 All galvanised steel construction
- 3 Powder coating in a range of colours
- 4 Fits within or around the reveal
- 5 Multi-point locking from single key 2 point
- 6 Strong steel lattice with smooth durable finish
- 7 Overlapped locking profiles
- 8 Optional folding bottom track
- 9 Steel rivetted lattice assembly system.

Gate Height Range (mm)	Number of lock hooks available
100	2 (4 optional)
1000-501	2
500-350	Fixed Panel

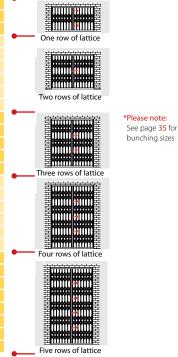

Please note: SeceuroGuard 1000 can accommodate an unlimited width with multiple sashes. Sashes are made in single pieces up to 2 m wide. Larger sizes are made in sections for assembly on site, ensuring the weight of each section can be handled safely. Gates which are wider than 4 m will be supplied with the top track in two pieces, the split will be in the middle. Where two split sashes meet two pickets are joined together using bolts and fixing plates supplied loose (see illustration above).

PG 30

LARGER WIDTHS AVAILABLE:

SeceuroGuard 1000 can be manufactured to suit wider openings. Contact your Account Manager if you require a price and more details.

Bottom track 'W' per metre	Code: YGA021S0	£14.80 per linear metre				
Replacement lock	Code: YGA133L0	£35.17 (specify keyed alike/different)				
Lock post	Code: YGA031S0	£4.55 per metre				

*Please note: Folding tracks with a length of 600 mm or more are supplied with a retaining pin as standard. This is located between 488 mm and 568 mm from the ground regardless of track length. The retaining pin projects 60 mm beyond the lock post when the track is lowered and 30 mm when raised. If the width of the gate is greater than the height check that there will be sufficient room for the bottom track to fold up into.

There is an extra lead time for component gate sections, please call 01524 772400 for details.

THIS PRODUCT CAN BE SeceuroGuard 1000 can be supplied in Band A & B colours at no extra charge. See page 68 for further details. For external applications, a dark colour is recommended.

FACE FIXED SIDE ELEVATION

The standard arrangement for a face fitted gate is as shown with the top track and sides face fixed and the bottom track reveal fixed. When ordering please identify clearly how each side of the frame will be fitted. Importantly, the size of your order will be manufactured to a height including fixing frame(s).

Retractable Security Gates

COMMON APPLICATIONS

Internal medium to high security domestic and selected

CONSTRUCTION

GENERAL ARRANGEMENT

- 1 Top hung on nylon coated steel bearings
- 2 All galvanised steel construction
- 3 Powder coating in a range of colours
- 4 Fits within or around the reveal
- 5 4 point locking from a single key with the lock mechanism shielded by a steel plate
- 6 Strong steel lattice with smooth durable finish
- 7 Overlapped locking profiles
- 8 Optional folding bottom track
- 9 The 1001 has a specially designed lattice assembly system utilising high grade steel screws (patented).

1001 INSTALLATION CRITERIA

The validity of the LPCB certification is contingent upon each security gate being installed in accordance with the requirements of LPS 1175.

Reveal or face installation

■ Min fixing distance from edge of reveal

■ Max fixing distance from any corner 100 mm ■ Max distance between fixing 400 mm

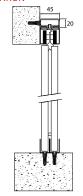

All fixing heads spoiled:

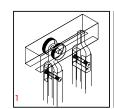

2.5" x 12s Masonry 4.0" x 12s Wood Steel 1.0" xM8s

50 mm

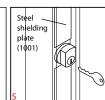

FACE FIXED SIDE FLEVATION

The standard arrangement for a face fitted gate is as shown with the top track and sides face fixed and the bottom track reveal fixed. When ordering please identify clearly how each side of the frame will be fitted. Importantly, the size of your order will be manufactured to a height including fixing frame(s).

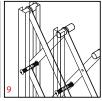

1111111 #4111

powder coated pre-galvanised steel.

Lattice

High grade steel in 'X' lattice as standard and 'S' lattice as an option. Weight 19 kgm2 nominal

Insurance approved

Tested and approved to Loss Prevention Standard (LPS) 1175 security Rating 1 by the Loss Prevention Certification Board (LPCB) the UK's leading independent certification body covering products, installers and installations in the fire and security sectors.

Enhan and ur gate be

nced burglary protection is achieved through the use of an advanced 4 point locking system	
ınique patented assembly system. The validity of LPCB certification is contingent upon each	
being installed in accordance with the requirements of LPS 1175.	

OPTIONS	
Folding bottom track*	£42.23 per sash
Fixed panel	Trade Discount increased 5%
Additional blank key	£4.32
Handle with fixings (one per sash supplied as standard)	£7.05 each
Reinforced top/bottom track for face fitting section)	£17.53 per metre (45 x 20 mm)

* Please note: Folding tracks with a length of 600 mm or more are supplied with a retaining pin as standard. This is located between 488 mm and 568 mm from the ground regardless of track length. The retaining pin projects 60 mm beyond the lock post when the track is lowered and 30 mm when raised.

Available component parts

Top track per metre	Code: YGA430S0	£14.45 per linear metre
Bottom track 'W' per metre	Code: YGA021S0	£14.80 per linear metre
Replacement lock	Code: YGA133L0	£35.17 (specify keyed alike/different)

THIS PRODUCT CAN BE SeceuroGuard 1001 can be supplied in BAND A & B colours at **POWDER COATED** no extra charge. See page 68 for further details. For external applications a dark colour is recommended.

SPECIAL LPCB RESTRICTIONS

Maximum Height 3000 mm Minimum Height 1000 mm* Maximum Width (bi-parting) 6000 mm Maximum Width (single sash) 3000 mm Minimum Width (bi-parting) 1000 mm Minimum Width (single sash) 500 mm

SWS UK reserve the right to undertake installation spot checks, in the interest of both trade customer and end user.

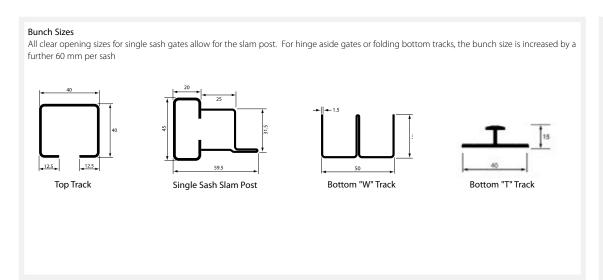

All approved gates carry a label

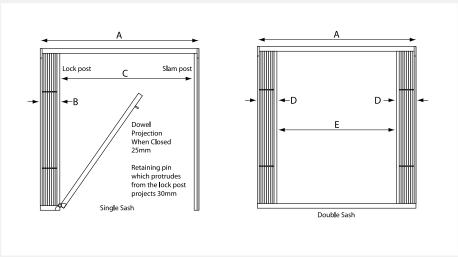

detailing the manufacturer, test standard and rating.

Please note: SeceuroGuard 1001 is NOT available with the hinge aside option, bottom running option, split top bottom tracks, removable bottom track or split sashes'

XP1 Saftidor – Single sash 1 no L205B LOCK PACK

2 no S36 'U' brackets 1 no S8 castor

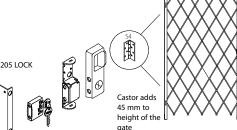

XP2 Saftidor - Double sash

1 no L205B LOCK PACK 2 no S8 castor 2 no S36 'U' brackets 1 no S25 shoot bolt 1 no S35 'T' brackets 1 no S9 carpet cover plate

> ■ The sashes come supplied as standard with a pair of hinges and are finished in white. Add price of lock or lock pack as required.

■ The S8 castor is recommended on all widths of 1150 mm and above. If you require an S8 castor please ensure you allow 45 mm for the height of the castor wheel when calculating for fitting the Saftidor within a reveal.

Note: Hinge aside facility

COMMON APPLICATIONS

Internal medium security trackless gate system with appealing diamond lattice aesthetic. Available 'off the shelf' as an ideal solution for projects requiring a fast turnaround.

CONSTRUCTION

Lattice

12.7 x 12.7 x 0.9 mm tubular white epoxy coated cold rolled steel lattice set into 38 mm steel "U" channels by use of pivot pins.

Saftidors and Saftiwindows bunch up to approximately 15% of their overall width.

Please note:

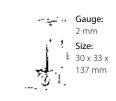

- The Saftidor is a diamond mesh collapsible gate, available in 7 standard widths and 2 heights (2 metres & 2.5 metres).
- Top Tracks are not supplied as standard but they are available as an optional extra in either a 2 or 3 metre length.
- Security can be enhanced with the addition of certain brackets
- Saftidors can be cut down in height for an extra charge (see above).

Standard off the shelf colour

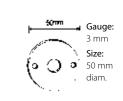

(RAL 9010)

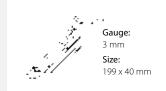

S8 SAFTIDOR CASTOR

Recommender for all Saftidors from size C to H. Fits in leading channel to support and align lock with lock keep.

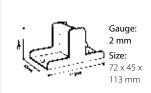

S9 CARPET COVER PLATE

When using a shoot bolt through a carpet prevents damage to carpet and finishes.

S25 SHOOT BOLT

Lockable shoot bolt used for various fittings but primarily for securing Saftidors when joining 2 or more gates together.

S35 DOUBLE LOCKING "T" BRACKET

Used for centre locking bi-parting Saftidors. Gives added rigidity and extra strength.

S36 "U" BRACKET

For locking two Saftidors together for added rigidity and extra strength.

180 degrees.

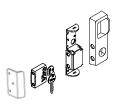

Saftiwindow Retractable Security Gate

Lock & accessory pack - XP4 - Double	YSW XP4	£78.99

L100 (SMALL) LOCK

*Please see general accessories listed on page 36 for accessories which are suitable for both Saftidors and Saftiwindows.

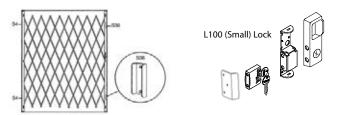

Please note:

- Saftiwindows are available in 2 widths and 5 heights, and like the Saftidor it can be used in a double sash format which correspondingly doubles the width options.
- Security can be enhanced with the addition of certain brackets. The sashes are supplied as standard with a pair of hinges and finished in white. Add price of lock or lock pack as required.
- Saftiwindows can be cut down in height for an extra charge.
- Top Tracks are not supplied as standard but they are available as an optional extra in either a 2 or 3 metre lenath.
- L100 locks are required with every Saftiwindow, unless the sash is being fitted as a fixed panel system. These locks can be supplied keyed alike.

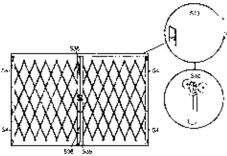

S10 SAFTIWINDOW / SAFTIDOR HANGER ROLLER

When hanging Saftiwindows or Saftidors using the top track, this roller is fitted into the top of the channel allowing the Saftidor/Saftiwindow to slide to the side. Option when two doors locking together.

SINGLE SASH SAFTIWINDOW

Using the S36 brackets above and below the lock ensures that the channel is secured top and bottom.

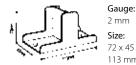

DOUBLE SASH SAFTIWINDOW

Using top track makes Saftidor and Saftiwindow very easy to fold to the side. Cutting the top track short in width allows the sash to drop out of track, allowing it to hinge to one side when fitted with the S4 butt hinges.

S13 TOP TRACK

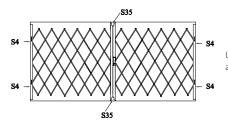

Aluminium top track for Saftiwindows and Saftidors.

2 mm 72 x 45 x 113 mm

S35 DOUBLE LOCKING "T" BRACKET

Used for centre locking bi-parting Saftidors. Gives added rigidity and extra strength.

Using two S35 "T" brackets ensures absolute rigidity in the centre.

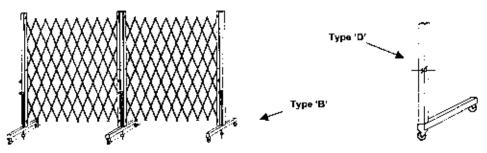

SWS UK | SeceuroShield Price List **PG 37**

Saftidor Trackless Barrier System

Trolley	Sales code	Price (£)
Saftidor trolley type "B" + shoot bolt	YSD TROLLEY B	£156.89
Saftidor trolley type "D" (required where 2 Saftidors meet at 90 degrees to each other)	YSDTROLLEY D	£125.06

- The system is completely trackless (no top or bottom track), operates on a series of steel trolleys and can be completely mobile.
- The system can span any width.
- The standard heights of Saftidors available are 2 m and 2.5 m

Overview

COMMON APPLICATIONS

Can be used for barrier access for shopping centres, factory units, car parks, loading bays, function centres, warehouses, sports facilities, crowd control or simply for partitioning.

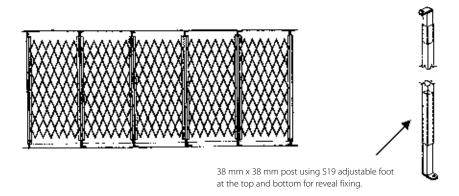

CONSTRUCTION

Saftidor units operating on a series of steel trolleys. See page 36 for Saftidor specification and prices.

Adjustable Post System

Post	Length	Sales code	Price (£)
S18 Post 38 mm x 38 mm	2 m	YXC S18	£38.40
S18 Post 38 mm x 38 mm	3 m	YXC S18*	£58.15
S19 Adjustable Foot	500 mm	YXC S19	£18.65
Spring loaded dust cover	n/a	YSLDC	£25.23

Overview

COMMON APPLICATIONS

Free standing post system used when fitting a line of Saftidors / Saftiwindows to a large expanse of windows or openings where there are no fixings available to allow the product to be fitted in a continuous line.

CONSTRUCTION

 $38\;\text{mm}\,\text{x}\,38\;\text{mm}$ hollow steel posts. Powder coated white. Available in either 2 m or 3 m lengths.

The S19 500 mm adjustable feet fit into the post top and bottom and can be fixed to the top and bottom of the opening.

S36 Locking 'U' Bracket	YSD S36	£8.90

- Xpanda Double Diamond doors can be unlocked from inside the premises by means of a thumb-turn lock, ensuring a quick keyless exit in emergencies.
 - There are no tracks and they hinge aside as standard if required.
 - The tight diamond pattern combined with a lock protection plate is designed to prevent intruders from reaching through the lattices to unlock the gate.
 - Particularly effective against 'smash and grab' raids.
 - Can also be installed with the L205B lock pack in non emergency exit applications.

Overview

COMMON APPLICATIONS

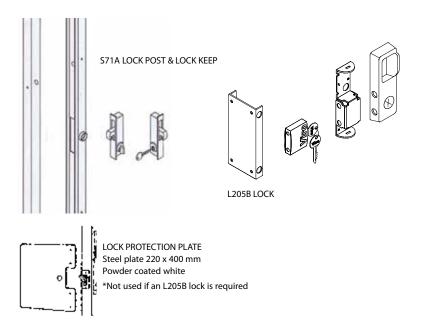

Specifically designed for securing emergency exit doors (always seek approval from the local fire officer) and vulnerable glass door entrances.

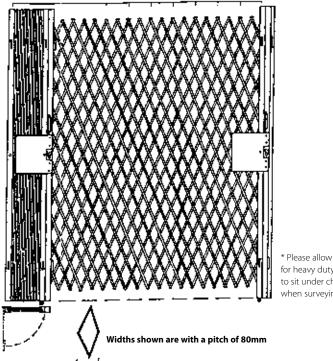

GOODSGUARD

Double Diamond can be fitted to any light commercial vehicle. Please note: any steel infill panels required are not available from SWS UK.

CONSTRUCTION

Tubular steel lattice powder coated white as standard.

* Please allow at least 60 mm for heavy duty castor wheel to sit under channel of door when surveying.

SWS UK | SeceuroShield Price List PG 39

Removable Window Bars

COMMON APPLICATIONS

APPLICATION GUIDE

The award winning SeceuroBar system uses tough powdercoated steel bars which are locked in place on the inside of windows, in either a vertical or horizontal format. Strong extruded aluminium retaining units secure each bar, yet the unique locking system means that they can be released in seconds.

SPECIFICATION AND SIZES

The maximum width available with single key operation is 3000 mm. However, wider openings can be accommodated with an additional lock and set of bars. The minimum width for removable bars is 250 mm. The maximum height available is 2100 mm when fitted with spreader bars which reduce bar deflection on taller applications and ease their removal. Openings up to 1500 mm in height can be accommodated without the use of spreader bars. The minimum height restriction is 200 mm. Each bar consists of a 19 mm steel outer tube with free-moving 15 mm steel inner tube. The bars are locked in place using a high security 10 pin radial camlock with 5 million + key combinations. The maximum number of SeceuroBar systems that can be keyed alike is 100. It is not possible for us to key alike orders to ones supplied previously. SeceuroBar is supplied in semi gloss white (RAL 9010) as standard, however other colours are available by quotation. On narrow, but high openings or doorways the system can be installed with the retaining units running vertically and steel bars horizontally. When mounting the bars horizontally the lock must always be fixed on the left hand side when viewed from inside looking out. SeceuroBar can be supplied with pre-powder coated aluminium packers to face fix the system to any wall. SeceuroBar removable window bars are designed to be fitted internally and under no circumstances are they to be installed externally.

INSTALL ATION

The system is designed to fit as close as possible to the window frame, this will avoid any cavity for dust and dirt to collect in. The top and bottom retaining units can be placed up to the window frame and the fixing positions marked with a pencil, the retaining units can then be removed and the appropriate size hole drilled. The minimum recommended fixing is 10 x 2" (50 mm) countersunk wood screws (see figure 1.). It is very important that countersunk screws are used, these will allow greater clearance in the top retaining unit. It is usually necessary to create a small recess directly below the lock position to allow the bottom fitment to seat correctly. For wider or horizontal bar applications the fixing plates can be secured within the retaining unit by using masking tape or a small amount of silicone sealer. (This will eliminate fixing plate movement). Before finally tightening the top and bottom retaining units the end caps should be moved out to the end of the opening, this will provide a neat and even finish to the system. The location of the fixing screw can be seen to the right.

OPERATION

SeceuroBar is operated by a single radial lock point. The key must always be pressed in before any key rotation is possible. All occupants of the building must be familiar with the operation of the system, and aware of the key's location.

STOCK COLOURS

THIS PRODUCT CAN BE POWDER COATED

(RAL 9010)

Please note: the plastic end caps are only available in white.

ORDERING NOTE:

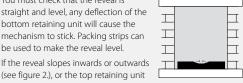

Ensure that tight reveal sizes (in particular the height) are given when ordering. Failure to do this could mean that the bars are cut too short for the opening compromising the level of security achieved.

HINTS & TIPS

SURVEYING

It is important to check during the survey that the opening is suitable for SeceuroBar. If the reveal construction is solid steel or a cavity then it would be better to face fix the system around the opening.

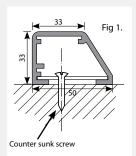

You must check that the reveal is straight and level, any deflection of the bottom retaining unit will cause the mechanism to stick. Packing strips can be used to make the reveal level.

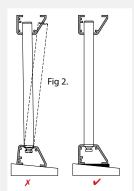

(see figure 2.), or the top retaining unit is not fitted directly above the bottom

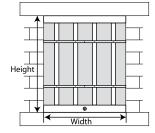

retaining unit, the sockets will not lock in the slider mechanism. The reveal should be levelled up with packing strips and re-measured.

When surveying for window bars which are fitted horizontally you must provide the width and height as shown in the diagram. The maximum width for a window bar fitted horizontally is 2000 mm. When mounting the bars horizontally the lock must always be on the left looking from the inside out.

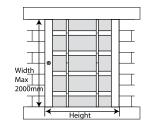

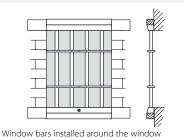

Convention installation within a window reveal

Window bars installed horizontally within a window reveal

(face fixing)

WHAT ARE SPREADER BARS?

Spreader bars are used to reduce the deflection on taller applications and ease removal of the bars. Two rows of spreader bars are required on all bar systems above 1500 mm tall. The spreader bars should be fitted one quarter tube height from the top and bottom to give maximum rigidity. The spreader bars are to be fitted before they are located into the top and bottom retaining units. Fixing is by M5 8 mm grub screw with 2.5 mm allen head.

FACE FIXING AND HORIZONTAL OPERATION

The system can be supplied (at additional cost) with pre powder coated 50 mm x 50 mm aluminium packers to face fix it to any wall. When mounting the bars horizontally the lock must always be fixed on the left hand side looking from inside out.

Overview

COMMON APPLICATIONS

Ideal for lower security domestic and commercial applications where removal of the security device is required occasionally. A very useful option for openings that fall below the minimum size for SeceuroGuard 1000 retractable security gates.

MAXIMUM & MINIMUM SIZES

When bars are fitted vertically:

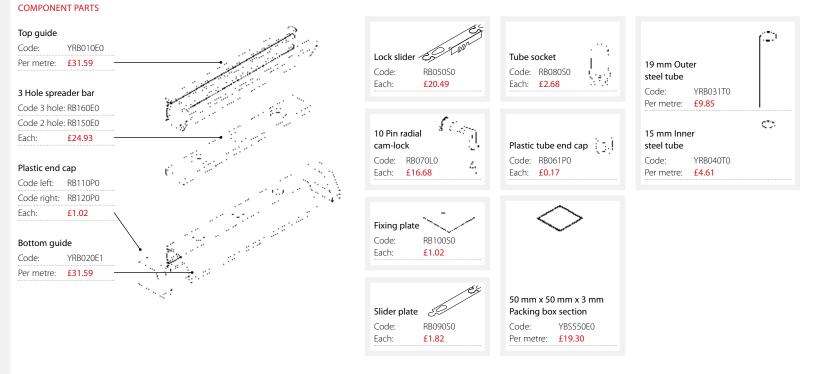

Minimum reveal width

Maximum reveal width 3000 mm (greater if multiple units are used) Minimum reveal height 200 mm Maximum reveal height 2100 mm Maximum reveal height without spreader bars 1500 mm

250 mm

When bars are fitted horizontally:

Minimum reveal width 200 mm Maximum reveal width 2000 mm Minimum reveal height 250 mm Maximum reveal height 2000 mm

Components - Slats & Endlocks

Please note: ORDERING - when ordering any slats, bottom slats or ready made curtains, please provide us with the cut size of the part(s) required. If you provide us with an overguide width or an over endlock width you must make this very clear on your order. Curtain prices include endlocks and a bottom slat and the prices will not be reduced if end locks or the bottom slat is not required. If the bottom slat requires a bottom slat lock fitted, the bottom slat will need to be 10 mm longer than slat length (with the exception of SeceuroVision 900) and a surcharge of £49.10 must be applied for supplying and fitting the lock.

Slat

SeceuroShield 150 uses a double skin foam filled aluminium slat, Spring and lock operated shutters are supplied nonvented as standard all other operations vented as standard but also available non-vented.

Stock lengths 6.5metres

SWS UK SeceuroShield Price List

Guide to purchasing Shutters

SURVEYING SHUTTERS

When performing a survey, the following steps will help to ensure that each shutter will fit the opening, and that the operation can also be installed comfortably.

GENERAL POINTS TO CONSIDER:

- Use the order forms as a guide during the survey to ensure you obtain all the relevant details during your visit to site.
- It is very important that you assess the requirements of your customer and each situation during the survey taking in to account the following points:
- Application / level of security required.
- Location and access (is this the only point of escape).
- Number of users who will be operating the product.
- Planning restrictions / requirements.
- Budget available.
- Aesthetics.
- It is the distributor's responsibility to ensure that a product is suitable for it's intended application. If in doubt, please contact our trade sales department for advice.
- Will the shutter catch on anything that protrudes past the brick-line (i.e. handles)?
- If the window / door opens outwards, will it still open after the shutter is installed?
- Do not forget that the bottom slat will hang down at least 50 mm below the box.
- Has the shutter got a cill to close onto or will cill angle be required?
- Are the walls level both inside and outside?
- Always measure the top, middle and bottom within the window reveal.
- Ensure that there is sufficient room for the shutter box and guide rails.
- Decide which would be the best side for the operator to be on. If electrically operated this may be influenced by the availability of a suitable power supply.
- Make sure there is nothing which may prevent the sweep of a rod crank or geared belt during operation.
- Note the thickness of the walls, walls over 300 mm thick will require an extension bar for crank operated shutters or manual override handles.
- If the shutter is for a doorway is the floor level?
- Please refer to page 1, "Specials section," if you require a product with a specification which is not featured in this price list.

REVEAL INSTALLATION DETAILS

- Will the shutter be installed over a door or a window? (please see page 1 "DOOR OR WINDOW")
- Ensure appropriate control method selected see page 65.
- Measure both sides of the reveal to make sure the walls do not run in or out.
- Always work to the smaller size and check that you can still use the operator.
- For the height, measure from floor or cill to the underside of the opening and deduct a 5mm for tolerance; this height will include your shutter box.

FACE INSTALLATION DETAILS

- When face fixing, is your operator hole going to damage anything on the inside of the house (e.g. power cables or sockets)?
- Take care to ensure that the width on the inside of the opening is not larger than the outside. If it is, work to the larger size to prevent the drilled hole breaking through the edge of the internal wall.
- For the height on Crank or Belt operated shutters, take the cill or floor to lintel
 measurement and add on the appropriate box size. Fitters will have to cut down the
 guides by approximately 30 mm on site to drill through for the operator below the
 lintel
- For the height on Spring balanced or Electrically operated shutters simply take the cill or floor to lintel height and add on the box sizes and bottom rail projection size normally 50mm.

BUILT-IN SHUTTERS

- Built-in shutter box sizes are 200, 225 and 295 mm square, always take measurements from window frames not from drawings.
- A packer may be required on the top of the window frame to ensure the window will not catch on the bottom slat with outward opening windows and doors.

It is advisable to take a spirit level on surveys with a selection of guide rails and box ends or templates of a box ends. This will help you when you are measuring.

PRICING SHUTTERS

Simply decide the type of shutter required, type of operation, appropriate box and guide rails and scale off the price list.

Below is a pricing example:

1 no. SeceuroShield 150 built-on security shutter in white, manual belt operation to be fitted around an opening size of 1350 mm wide x 1200 high.

1350 mm + 106 mm (i.e. 2 x 53 mm H25 guide rails)

= 1456 mm overall width

1200 mm + 165 mm box

= 1365 mm overall height

(increase height to allow for bottom slat hang down if desired)

The price band is $1500 \text{ mm} \times 1400 \text{ mm} = £382.00$ excluding VAT, less discount, plus £40.00 delivery if the total order value falls below £400.

SHUTTER ALTERATIONS

We appreciate that from time to time due to unforeseen circumstances it is may be necessary to alter the size of a shutter after it has been ordered. Once we have started manufacturing it, this can cause a considerable amount of additional work. Some or all of the components may have been cut. Moreover, all documentation including cutting sheets has to be recalled from the factory, a new set of paperwork issued and the work rescheduled. In view of this we make a minimum £15.52 administration charge depending on what work has been completed. Please bear this in mind if your customer asks to make any changes.

On orders already delivered it is relatively simple to reduce a shutter's height. Increasing the height of a shutter is much more involved as it may necessitate replacing guide rails, axle, box, end plates etc. Reducing a shutter's width is again possible, but is best carried out in our factory.

RECOMMENDED MINIMUM FIXINGS

- Please note SWS UK does not supply fixings with any of the products featured in this price list.
- End plates and guide rails secured to masonry or wood must be fixed using at least 2 1/2" x 12s (steel countersunk hardened & zinc plated) with penny washers. When fixing to masonry a 7mm hole is required in conjunction with a brown Rawl plugs. When fixing to steel use at least 1" x 12s self drilling / tapping screws (steel hardened & zinc plated)
- Every shutter box must be secured at 1 metre centres using at least 1 1/2" 10s (steel countersunk hardened & zinc plated) with penny washers.
- The above are the minimum requirements. Installation engineers must assess the structural integrity of the building material to be fixed to, combined with any environmental influences (strong winds) and the level of security required.
- It is always far preferable to use too many fixings than too few.

WIND LOADING

As of July 2013, to comply with the Construction Products Directive, all shutters which are manufactured for installation over door ways must be tested by a notified test body for their wind loading capability, as per BS EN 12424 and 12444. For doors fitted on to an external façade they must reach a minimum of Class 2. During testing both sides of the curtain must be tested.

SUMMARY OF WIND LOADING CLASSIFICATION:

	Product	Conditions	Classification
S	eceuroShield 38	H30 guides, up to 4 m wide	2
S	eceuroShield 38	H30 guides, up to 3.5 m wide	3
S	SeceuroVision 38	H30 guides, up to 3 m wide	2
S	eceuroShield 38	H40/S guides, up to 4 m wide	3
S	eceuroShield 60	UPH250 guides, up to 5 m wide	3
S	eceuroShield 60	UPH250 guides, up to 6 m wide	2
2	SeceuroShield 75	UPH250 guides, tp to 6 m wide	2
S	eceuroShield 77	Up to 4.8 m wide	3
S	eceuroShield 77	Up to 5.4 m wide	2
Se	eceuroShield 800	Punched & glazed, up to 6m wide	2

Wind Loading	Pressure	Wind Speed	Beaufort Scale		ort Scale	
Classification	(pa)	(mph)	No.	Description	Conditions	
2	Above 460	59	10	Storm	Trees uprooted, considerable damage	
3	Above 700	73	11	Violent Storm	Wide spread damage	
4	Above 1000	88	12	Hurricane	Wide spread damage	

Guide to purchasing Retractable Security Gates

SURVEYING RETRACTABLE SECURITY GATES

When performing a survey, the following steps will help to ensure that each gate will fit the opening. Wherever possible the following notes should be used in conjunction with a brochure.

GENERAL POINTS TO CONSIDER:

- We recommend that wherever possible retractable gates are fitted internally to enhance security and ease of operation.
- Where an external installation is desirable, the insurance approved SeceuroGuard 1001 is the most suitable option. We recommend that all externally fitted gates should be ordered in a dark colour as some corrosion will appear over a period.
- Always check what material has been used in the construction of the opening. This
 is essential when fitting an LPCB approved product. Fixing into plasterboard or
 Thermalite block is not acceptable.
- Please be mindful that SeceuroGuard gates weigh 19kgs per square meter and as such require a very secure fixing for the top track. Although not an option on the LPCB approved SeceuroGuard 1001, it is possible to make SeceuroGuard 1000 bottom running to channel some of the weight through the bottom track.
- Will the gate catch on anything that protrudes from the window or surround (i.e. handles)?
- If the window / door opens inwards, will it still open after the gate is installed? If not a face fit installation may be appropriate.
- Are the walls level inside the opening? It is advisable to take a spirit level on surveys.
- Consider the size and side of the gate's sash or whether bi-parting is a better option.
- If fitting in or around a doorway, we recommend the use of folding or removable bottom tracks from a health and safety point of view.
- Where access is required at both side(s) of an opening, consider opting for a floating sash.
- Where fixed security is required, SeceuroGuard 1000 & 1001 can be manufactured as fixed panels. This option is particularly useful for protecting low height apertures.
- You must take into consideration during the survey that SeceuroGuard's which are different sizes, on the same elevation may contain different numbers of lattices and pickets. See the tables showing the changeover points on the following page.

REVEAL INSTALLATION DETAILS

- Will the gate's sashes obscure more of the window than a client is prepared to accept? If so a face fit installation may be appropriate.
- Always measure the top, middles and bottom within the window reveal.
- Always work to the smaller size and if appropriate use packers to ensure the gate is square in the aperture.
- For the height, measure from cill or floor to the underside of the opening and deduct a 5 mm for tolerance.

FACE INSTALLATION DETAILS

- When face fixing, is the wall flat? Look out for uneven plaster that might catch on the gate's sashes as they slide open. It is still possible to install a gate under these circumstances by packing it off the wall to achieve adequate clearance.
- When quoting please remember to add on the width of the gates sashes and add the cost of a fixing frame.
- A standard fixing frame kit comprises one 20mm high 'C' section that comes attached to the top track. This is suitable for doorways – see illustration, right.
- When face fitting around a window, it is advisable to order an additional length of 'C' section that is attached to the bottom track in our factory. If you require this 'C' section for face fixing the bottom track you must specify this in the special requirements section of the order form.

PRICING RETRACTABLE SECURITY GATES

Firstly, decide on the level of security required i.e. standard SeceuroGuard 1000 or insurance industry (LPCB) approved SeceuroGuard 1001. Secondly, consider the type of installation, i.e. reveal or face fitted. Finally, any optional extras such as folding bottom tracks etc. Unlike some companies, we charge the same price for single or bi-parting sashes and for straight or decorative 'S' lattices.

Below is a pricing example:

1 no. Reveal fitted SeceuroGuard 1000 (single sash) in white, to suit a window reveal size of 1550 mm wide x 1150 mm high.

1550 mm (price band width = 1600 mm)

1150 mm (price band height = 1200 mm)

= £466 excluding VAT, less distributor discount, plus £40.00 for delivery if the total order value falls below £400.

PICKET QUANTITY CHANGEOVER

1000 - 1599	2
1600 - 2099	3
2100 - 2699	4
2700 - 3500	5

MANUFACTURING SIZES AND TOLERANCES

All products are manufactured to the sizes given on your order. It is therefore important that you make any deductions or additions which may be necessary before placing your order. Reveal Fitting – we normally recommend that 5 mm is deducted in total from both the width and height.

Face Fitting – If you are face fitting around an opening, which must be a clear opening, you should take into consideration the following:

WIDTH

- Bunch sizes, please refer to the bunch size charts provided (see pages 35.
- If you require folding tracks add 60 mm to the bunch size for each folding track.
- If you require the hinge aside option the bunch size should be increased by a further 30 mm per bunch.

HEIGHT

- Allow for the height of the top track and if applicable the height of the bottom track.
- If you are face fixing the top or bottom tracks you should allow an extra 20 mm for the fixing frame required. The manufacturing height you supply on your order should include this fixing frame where appropriate.

All dimensions must be supplied in millimetres. To convert from inches to millimetres multiply the dimension in inches by 25.4.

If you require assistance with converting from imperial to metric calculator on the SWS UK website www.swsuk.co.uk

RETRACTABLE SECURITY GATE ALTERATIONS

Although not impossible it is very difficult to reduce a retractable gate in height. Increases in height are not possible, however there is the option to use a packer to bridge any gap. Like shutters, a gate's width cannot be increased but may be reduced, however please bear in mind that this will reduce the distance between pickets and therefore the level of vision.

For further information refer to the SeceuroGuard technical guide.

TERMINOLOGY

The following lists the preferred terminology applied to SeceuroGuard gates (in Bold) and alternatives which are also in common use:

SASH Bunch / Stack / Hand

TOP TRACK Top runner / Top Rail / Top Guide

FOLDING TRACK Lift up / Hinge (should not be used -can be confused with the

hinge aside option)

REMOVABLE TRACK Lift Out / Lift Off

HINGE ASIDE Hinging Sash / Swinging Sash / Fold Back

C-SIDE FIXING FRAME C-Side / Reinforcing for Top Track / Strengthening for Top Track

REVEAL FIXED Between Walls / Recess
FACE FIXED Surface Mounted / Plant On
BI-PARTING Double / Double Draw / Split

KEYED ALIKE Suited / Same

SWS UK | Seceuro Shield Price List

Guide to Electrically Operated Shutters

QUICK GUIDE TO ELECTRICALLY OPERATED SHUTTERS, OPTIONS AND ACCESSORIES

Electric Motors are required on larger shutters and are optional on smaller shutters. Tubular motors fit inside the axle and operation is by push button momentary switch, key switch or remote control. A manual override can be specified to operate from inside. Where desirable a manual override can also be engaged through the outside of an externally fitted shutter box. Under these circumstances a lockable override cover is available as an optional extra to maximise security. Multi-shutter electric installations can be wired to operate from group switches using a group command only. Ask for further details. Care should be taken to ensure that such installations are in line with current Health and Safety legislation.

MOTOR CONNECTION

You will need to connect the motor to either a momentary switch or a control unit. Power should be supplied via a 13 amp switched fused spur or a 13 amp switched plug socket. It is suggested that the power is provided by an 'unprotected' fused spur as the motor on startup may trip the RCD on the main fuse board (if fitted). Plugs and spurs should be fitted with a 3 amp fuse. Ensure power is switched off before any electrical connections are attempted.

POWER REQUIREMENT

A Shutter up to 5sqm/50kg typically draws 1.1A/240W A Shutter up to 10sqm/100kg typically draws 1.5A/320W

CF MARKING

All SWS shutters are compliant with the relevant standards:

- The supply of machinery (safety) regulations 1992
- Construction Product Regulations (BSEN13241-1).

For further CE information see page 2.

All electrical installations must comply with the IEE wiring regulations (BS 7671) 17th edition (current). If in doubt consult a qualified electrician. It is the responsibility of the installer to CE mark electrically operated products – see page 2 for further details.

SAFETY FIRST

To comply with current health and safety legislation, the operator of an electrically operated shutter(s) must monitor the progress of the shutter(s) throughout operation. If this is not possible a safety device must be fitted to stop an obstructed shutter during operation. Alternatively, an audible and visual warning must precede the operation of the shutter(s) on each elevation of the building where a shutter is installed.

Due to risks associated with unattended open roller grilles (SeceuroVision 900) and shutters (unglazed SeceuroVision 38 & 800) we do not recommend the use of remote control systems even when fitted with dual photo cells. Under these circumstances a hold-to-run switch should be used in full sight of the product. Alternatively, consider using a fully glazed version of SeceuroVision 38 & 800.

motors Somf

HiPro tubular motors are a new generation of motors designed for the professional installer. These motors incorporate several design features, which make installation a quick and trouble free operation.

All Somfy motors feature:

- Rapid-set push button limit switches
- Clip-on drive adapters
- Multiple mounting positions of motor head
- Wide crown wheel for improved tube fit
- Supply cable via removable connector

LIMITS

LIMIT SETTING DETAILS

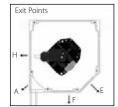

Always use a motor test lead Ref: EC409O0 (see page 24)

Two positions have to be set: the UP and DOWN positions, this is where the motor will stop automatically.

- 1. Ensure the control switch is in the OFF position.
- 2. Remove the protective cap from the head of the motor.
- 3. Fully depress both limit switch buttons. They will automatically lock in the down position. Operate the control switch and check the direction of rotation. If it is incorrect, turn the switch OFF, reverse the black and brown motor direction wires and try again.
- 4. Identify the UP limit switch push button. Press the control switch to the UP direction until the required position is reached then turn the switch OFF.
- 5. Unlock the UP limit switch push button by depressing and releasing it to set the limit.
- 6. Repeat the above operation to set the lower limit.
- 7. Check with the control switch that the motor stops at the UP and DOWN positions just set.
- 8. Refit the protective cap (take care not to depress the push buttons).

MANUAL OVERRIDE SHUTTERS

Not all exit options will be possible on certain shutters.

If a manual override is required for use in the event of power failure this must be specified at the time of ordering. There is a choice of technical solutions for the handle mechanism which operates the override, principally dependent upon whether the shutter is installed internally or externally and whether the override is to operate from inside or outside the building. Override locks and the low level external override are available at a surcharge. All specifications refer to a 205 mm box or larger. As standard, the low level external overide can now be operated from both the inside and outside.

USE OF MANUAL OVERRIDE SHUTTERS

Clear instruction must be given to users on the manual override winding direction to raise the shutter. Winding the shutter downwards beyond the normal stop point will damage the shutter. To help avoid this we supply a swing ticket.

EXTERNALLY FITTED SHUTTER WITH EXTERNAL OVERRIDE

A removable 45° joint crank handle is inserted into the motor. The exit hole is filled with an 18mm cover cap or an optional lockable override cover. Only available on shutter box exit'E'.

lockable coverplate option.

EXTERNALLY FITTED SHUTTER WITH INTERNAL OVERRIDE

A permanently installed internal 90° handle, exit A or H can often be specified subject to final survey and dependent on the construction of the building specification.

INTERNALLY FITTED SHUTTER WITH INTERNAL OVERRIDE

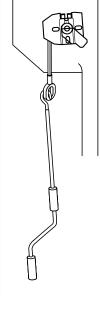

A fixed eye can be supplied at shutter box exit 'F' with a removable hooked handle of 1100mm as standard. Alternatively a fixed 45° joint crank handle can be supplied at box exit 'E' or 'F'.

INTERNALLY FITTED SHUTTER WITH EXTERNAL OVERRIDE

The low level external override (exit F) is operated by unlocking the override cover plate and inserting the winding handle. As standard the low level external override can now be operated from both the inside and outside.

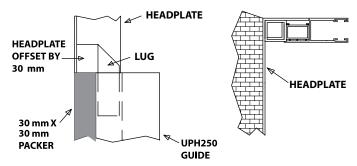

MOTOR BOX EXTENSION

A box extension is required on built-on SeceuroShield 60/75/800 shutters when the curtain weight exceeds 172kg on a 4" axle and 134kg on a 5" axle. Please refer to the appropriate price table to identify when a box extension will be required. The projection is just 30 mm for face fixed shutters. If the shutter is reveal fixed the gap is made up using a 30 mm packer, as shown in the illustration. The overall width used when pricing and ordering shutters with box extensions is the overguide width (not including the box extension or 30 mm packer). If you are in any doubt please contact your Trade Sales Account Manager.

Guide to Electrically Operated Shutters

CONTROL EQUIPMENT SELECTION FOR SHUTTERS FITTED OVER DOORWAYS

As standard all electrically operated shutters will be supplied with an Inis Uno single pole hold to run switch. It is your responsibility to determine the appropriate control equipment for each application and notify us in writing on your order if you require non standard control equipment. This selection must take into account the minimum levels of safeguarding required for the bottom slat (main edge) and also the quantity of shutters being operated. The table below summarises the minimum levels of safeguarding for doorways and serverys, please note this is our interpretation of BS EN 12453:2000 Clause 5.5.1.

BS EN 12453:2000 CLAUSE 5.5.1

The minimum levels of safeguarding of the main edge are listed in the table below:

	Types of use			
Type of door activation	Trained users (no public)	Trained users (public)	Untrained users	
Hold to run control	Hold to run	Hold to run switch key switch or similar	not possible	
Impulse activation in sight of door (impulse switch)	Safety edge	Safety edge	Safety edge & PEC*	
Impulse activation out of sight of door (remote control)	Safety edge & PEC*	Safety edge	Safety edge & PEC*	
Automatic control (Time clock / auto clock)	Safety edge & PEC*	Safety edge & PEC*	Safety edge & PEC*	

^{*}PEC = Photo Electric Cell (safety photo cell)

EXAMPLES:

- Trained users (no public) Domestic garage doors, Private offices
- Trained users (public) Domestic garage doors opening directly on to public, Shop shutters
- Untrained users Large corporate companies, schools, public buildings, multi users where training can not be guaranteed

HOLD TO RUN CONTROLS

SWITCHES

The Inis Uno and Inis Duo are for controlling either one or two shutters respectively. As standard all switches will be supplied with a back box for surface mounting but an alternative flush mounting back box can be requested.

80 mm

Double Control

KEY SWITCHES

Key switches provide a more secure hold to run control method. They are available as either single or dual pole for controlling either one or two shutters respectively.

Two way single pole momentary and dual pole momentary key switches are available as an option for security controlled operation.

RB04 GROUP CONTROLLER

- The RB04 group controller is directly compatible with the SeceuroSmart Professional remote control, KS02 anti-tamper controller and Promate.
- The RB04 group controller allows the user to control up to four shutters simultaneously by wiring the control into a switch.
- The RB04 enables individual control of each shutter, sub-group control and master control.
- The control wiring to the switches is extra low voltage (24VDC) protecting the installer and user from electric shocks by either direct or indirect contact.
- RB04 control units can be grouped together allowing an unlimited numbers of shutters to be operated simultaneously from one switch.
- RB04 RB04 can be wired in to fire and burglar alarm panels enabling shutters to close in an emergency situation.
- A hold to run switch in sight of the shutters is recommended when using a group controller.

WIRING DIAGRAMS

Wiring diagrams for many of our switches and control units are available from the Online Distributor Area at

www.sws.co.uk/wiring diagrams

Contact Marketing for further details.

GROUP CONTROLLER DIAGRAM STOCK SON PONE SOLATORS CONNECTIVES REPORT TO SOLATORS RE

KS02 ANTI-TAMPER CONTROLLER

- The KS02 anti-tamper controller is supplied with an anti-tamper key switch as standard.
- If the key switch is attacked by vandals or thieves the KS02 is disabled preventing unwanted operation of the shutter by thieves.
- The KS02 can be linked to a burglar alarm which can be activated if the key switch is attacked.
- The control wiring to the key switch is extra low voltage (24VDC), protecting the user and installer from the risk of receiving both direct and indirect electric shocks.

PROMATE

ProMate is a dedicated control unit designed for single phase tubular motors.

KEY FEATURES:

- Low carbon footprint <0.5 watts.
- Designed for installers without electrical qualifications.
- Dynamic user interface, simple and easy to understand.
- Plug and play battery back-up (optional).
- Compliant to 13241-1.
- Touch safe voltages for all inputs.

BATTERY BACK-UP

KEY PRODUCT FEATURES:

- Provides back up for 12 hours
- Instantly activates in the event of a power failure
- LCD display showing battery level and power being consumed
- Independent on/off button
- Power leads supplied as standard
- 3 pin plug with 5amp fuse required (not included with kit)
- Unit shuts off when battery levels are low to protect the batteries
- Optional mounting bracket available for a surcharge (must be requested)
- When used with a SeceuroSense remote control the anti-entrapment feature must be deactivated in the remote control and a box lid fitted on all doors less than 2.5 m in height

SWS UK | SeceuroShield Price List

From brochures and point of sale boards to samples and an interactive website, our Marketing Team offer a comprehensive support service which can be catered to your specific needs...

WWW.SWS.CO.UK

The SWS UK website is continually developing to provide a useful and informative resource for influencers, specifiers, distributors and end users. The website has a number of key features including **detailed product information**, informative **videos and graphics** and **useful tools** such as RAL charts and all the latest news.

Detailed product information plus informative videos and graphics.

POINT OF SALE

Point of sale displays can make a real impact in a show room or as part of a demonstration. Our displays have been specifically designed to highlight the key benefits and features of our product range.

They can be ordered by contacting your Regional Sales Manager.

RESOURCES AT THE CLICK OF A BUTTON

The Distributor Section of our website offers a range of invaluable resources including online ordering, downloadable brochures and images. To gain access to this exclusive section of the site please register for a username and password by calling a member of the Marketing Team on 01524 772413.

Online ordering for all products ensures that we receive all the required information to process your order quickly and efficiently. There is also a download area for literature, price lists, fitting instructions and CE documentation. Plus an image gallery for downloading high resolution jpegs used in SWS UK catalogues

EXHIBITIONS

Exhibitions are an excellent opportunity to advertise your product range, generate enquiries and meet new customers. SWS UK have a range of exhibition materials available on a loan basis. Furthermore, your Regional Sales Manager will be happy to assist with local exhibitions and events. They can provide support on set-up/take-down days and manning the stand. If you are interested in this service, please contact the Marketing Department at least three weeks before the event. Support is provided on a first come, first served basis.

SHOW TRAILER

SWS UK's Showtrailer features a wide variety of our products in one mobile unit. Ideal for generating sales from county shows, supermarkets, garden centres and open days our show trailer is a sure winner.

The Showtrailer is available to hire at £200.
Please contact the Marketing Department for further

INSIDER NEWSLETTER

SWS UK produce regular eshots which keep you up to date with our latest devlopments and important industry news. If you are not subscribed please call: 01524 772413 to register your details.

PHOTOGRAPHY

Colours & Powder Coating

INTRODUCTION

Polyester powder coating is a surface finish applied to shutters and retractable gates in a solid, powder form after careful pretreatment of the surface. The coating is fused by heat to produce a continuous film and curing of the coating gives its design properties. The result is a high performance finish that delivers exceptional corrosion protection, durability and resistance to yellowing making it suitable for both interior and exterior use. The process is virtually emission free, so is environmentally friendly.

FEATURES

- Typically 60-80 Microns coating thickness
- Excellent corrosion protection
- Superior colour stability
- Tough yet highly flexible

Extruded profiles and the aluminium shutter box profiles are powder coated in a satin finish (unless stated otherwise).

GLOSS LEVELS

Gloss (80% +/-5%): A highly reflective smooth surface. Gloss surfaces due to their highly reflective appearance tend to highlight surface imperfections.

Satin (65% +/-5%): A satin finish is not as reflective as the gloss finish and because of this is less likely to show any surface imperfections. Satin finishes also provide a good surface for cleaning and resisting abrasion. Unless stated otherwise this is the standard finish supplied.

Matt (30% +/-5%): A matt finish due to the low gloss level is very good at concealing surface imperfections. Due to the textured finish the surface is more difficult to clean than a surface with a higher gloss level.

TOUCH-UP PAINT

For repairing minor blemishes to the finish surface touch-up paint is available

Touch-up paint pot (25ml) Code: PC100P0 PRICE: £5.19

NOTES

All colours are supplied in Satin as standard, Matt & Gloss are available.

Bands Standard, A and B are available on gates as standard. Other RAL and BS colours are available, please contact your Account Manager for further details.

There is a minimum powder coating charge of £67 net.

Please note: We cannot powder coat SeceuroShield 150.

To see the full colour bands with the full range available visit www.sws.co.uk/ral-colour-chart

LOCAL COLLECTIONS

For urgent orders in certain areas of the country collection is possible from our 4 distribution depots

Scotland (Livingston) 6 Oakbank Park Place Mid Calder

Mid Calder Livingston EH53 0TN Midlands (Willenhall)

Midlands (Willenhall) Neightfreight (GB) Ltd Unit 1 Bays 1, 2, 3 East Acre, Off Long Acre Willenhall WV13 2JZ

South West (Bristol)

Nightfreight (GB) Ltd 18 Pucklechurch Trading Estates Bristol BS16 9QH

South East (Hoddeston) Neightfreight (GB) Ltd Units 11-13 Trident Industrial Estate Pindar Road, Hoddesdon Hertfordshire EN11 OSF

COMPONENT ORDERS

All small component orders required next day **must be received** by **2** pm the day before delivery. Orders placed on a Friday **must** be received by **12** noon for delivery on Monday.

If you require powder-coated items, please allow an additional 24 hours at least from the receipt of order. Items for assembly need to be booked in for manufacturing – for example complete shutter curtains. Please allow a minimum of three working days depending on the delivery method.

Regrettably it is not possible to send items over 5 m in length by overnight carriers.

IMPORTANT DELIVERY NOTE

The most cost effective and safest way of delivering orders is via our own transport. Please try to tie orders in with your normal delivery runs wherever possible.

In the event of using a carrier, we need to use reinforced packaging.

CRATE CHARGES

We can offer delivery by crate on a POA basis. Please speak to your Account Manager.

PACKAGING

Over recent years we have refined our use of packaging to reduce the likelihood of goods being damaged in transit.

- Shutter boxes are packed individually using bubble wrap and / or cardboard.
- Curtains / guide rails are packaged using bubble wrap and / or
- Aluminium packers are typically packaged with guide rails on the same order.
- Where overnight carriers are used, curtains and guide rails are also wrapped in bubble wrap and cardboard.
- With the exception of spring operation, shutters are supplied with an accessory box containing: switches, swivel belts, crank handles, keys and installation documentation as appropriate.
- Cardboard boxes are secured using nylon banding for ease of opening. These must not be used as a handle for lifting.
- Water resistant film can be added to cardboard packages at additional cost.

- Retractable security gate sashes and tracks are packaged separately in several layers of bubble wrap.
- Keys for retractable gates are packaged in a bright yellow Jiffy bag attached to the end of the sash.

DELIVERY CHECK-LIST

A. Pre-delivery

- A postcode must be supplied for all delivery addresses.
- We currently operate a range of delivery vehicles. It is therefore important to check the lorry's dimensions when arranging a delivery for the first time.
- If you require a delivery to site you must supply us with a contact name and a contact telephone number of the person who will assist the driver to unload.

B. Receipt of goods - own premises

- We require a person to assist off-load, check and sign for goods.
- For large deliveries, please ensure you have several people to assist, this will minimise any delays for subsequent customers.
- Deliveries received must be checked before signing the delivery note. It is not possible to claim compensation for damaged or missing items unless highlighted on the drivers delivery notes. If possible take a copy of this documentation for future reference.

C. Receipt of goods – to site

- Deliveries will only be made to site if an installer is present to assist the driver with unloading and to check and sign for the goods.
- For large deliveries, please ensure you have several people to assist, this will minimise any delays for subsequent customers.
- Before the goods arrive, please prepare a location to unload and store the items safely and securely.
- Deliveries received by overnight carrier must be checked before signing the delivery note. It is not possible to claim compensation for damaged or missing items unless highlighted on the drivers delivery notes. If possible take a copy of this documentation for future reference

D. Claims for damages

- Please check the contents of your order against the delivery note on the day received. Care should be taken when using sharp objects to cut through the packaging.
- Claims for missing or damaged items will only be processed if the drivers delivery note has been signed for as damaged or missing and must be reported within 2 days of delivery.

IF YOU SUSPECT DAMAGE Please fully inspect the product prior to signing. If the product is damage, clearly state "DAMAGED" when signing the consignment note. Signing as "Unchecked" is insufficient.

WARRANTIES

SeceuroShield products are guaranteed against defect of material or workmanship by SWS UK, subject to the correct installation, maintenance and operation for a period of 2 years from the date of purchase. In addition the Somfy motors used on the shutter

range are guaranteed for 5 years against faulty materials and workmanship.

Where a warranty is upheld, SWS UK will supply all necessary parts to enable distributors / installers to complete a satisfactory repair. The warranty terms do not extend to cover labour and consequential loss arising from any claim.

RETURN & REPLACEMENT PARTS

Occasionally it may be necessary to return an item to us. Please contact your Account Manager for an NCR number and ensure that the product is packed appropriately and clearly labelled with the number given.

The return goods note is a two part document, there is a copy for you to retain and a copy to be sent back with the goods. If the goods are being returned by post, please send this for the attention of the Quality Department with the returns note. Should you require the goods to be collected by SWS UK, please contact your Account Manager to arrange this. Collections by SWS UK will be made within 10 working days of notification in most cases.

Replacement parts

Before requesting any replacement parts, please ensure that a Damage Identification Sheet is completed and returned to customerservicesfaxes@swsuk.co.uk along with a photograph. Your parts will then be despatched by the most effect method of transport. If you have any queries, please contact your Internal Account Manager.

CONDITIONS OF SALE

All goods are offered for sale in accordance with our standard conditions of sale, a copy of which is available on request, and is reproduced on our web site www.swsuk.co.uk.

OFFICE HOURS

Over the years we have tried to align our opening hours with the preferences of our customers. Starting early is intended to enable customers to resolve any issues before starting their day's work.

Monday to Thursday 8.15am to 5.00pm
Friday 8.15am to 3.45pm
Out of hours site technical queries 07779 314226

To help improve our levels of customer service and to assist with training, calls may be recorded.

TERMS OF BUSINESS

Payment Terms

Initially, new customers are required to purchase goods on a pro-forma basis. If you wish to apply for a credit account, please complete a credit account application form (available on request). Your application will be processed by our Accounts Department, however submitting a form does not automatically quarantee an account will be opened.

SWS UK reserves the right to withdraw trade credit accounts where:

- Turnover falls below £1,000 per annum. In this event, goods will continue to be supplied on a pro-forma basis.
- An account payment is received more than 10 working days late.

All orders should be placed using SWS UK's official order form (see pages 51 - 58). This minimises the likelihood of any misunderstandings and accelerates order processing.

Once processed all orders will be faxed back to you for final checking. Enquiries should be made to your Internal Account Manager. If you do not receive an order confirmation within 48 hours or sooner in the case of urgent orders, please contact the Trade Sales Office immediately.

In the event that a trade customer fails to confirm that their order has been interpreted correctly, manufacturing will still go ahead. However, SWS UK accepts no responsibility for manufacturing errors which are apparent from the order confirmation.

DELIVERIES

Claims for damages will only be processed if reported within 2 days of delivery. Please check the contents of your order on the day received. It may therefore be necessary for you to open packages prior to their despatch to site.

Queries relating to invoices must be notified to the Credit Controller within 7 days of receipt of invoice. This will ensure that we have the time to investigate and resolve your enquiry without it delaying any payments due to ourselves.
